

Can you help identify this "Schermack"?

The accompanying photos are of a one-cent Scott 343 Schermack with a strange punch. This is the second copy of this perfin I have

seen. The holes are the same size as known control perfins but the spacing does not match the standard nine-hole or twelve-hole patterns. Nor does it match any of the known hole punches on Schermacks. Are there any more copies out there? On cover? Any clues? I will reply to any correspon-

dence received. Thanks. Al Glass (#3840), 383 Banbury Road, Mundelein, IL 60060, or phone 847-566-4248, or e-mail at athollglass@hotmail.com.
